

Pramati announces release plans for J2EE 1.4 compatible application server

Hyderabad, India | San Jose, CA | April 26, 2004

Pramati Technologies has announced that its J2EE™ compatible application server, Pramati Server, will be certified for J2EE version 1.4 in Q3 2004. Pramati has been a pioneer in bringing robust and feature rich implementations of the J2EE standard to the market.

J2EE 1.4 includes a comprehensive set of standards and protocols for building Web Services applications, including WS-I Basic Profile and JAX RPC 1.0. Pramati participated actively in the Java Community Process™ Program Expert Group that worked on J2EE 1.4 specification.

Pramati Server provides features and performance comparable to the big-name application servers at one-third their price. The combination of a highly usable product and responsive support at a low price has made Pramati a compelling platform for mid-market customers, departments of large corporations, and ISVs.

Pramati CTO, Vijay Pullur, says: "This segment is highly sensitive to price but does not want to compromise on features, performance or support. Pramati is filling this gap in the market with a high quality product and services".

XLNT Software Solutions, Inc., of Lancaster PA is an ISV partner of Pramati. XLNT's TReX Application Framework (TAF), is optimized to run on Pramati Server and was recently selected by Carlisle SynTec (NYSE: CSL) for developing and deploying their new International Warranty Management applications.

Anand Iyer, Principal Architect of XLNT says: "We are looking forward to a J2EE 1.4 compatible Pramati Server. Our product road map is aligned with Pramati and we plan to use the new features to make Web Services functionality a standard in our solution". ■

About Pramati

Pramati Technologies provides a comprehensive suite of products for design, development, deployment and management of J2EE™ applications to customers worldwide. The company's flagship product is a J2EE 1.3 compliant application server, the preferred choice of enterprises who need standards and performance at competitive price. Pramati Server today is in production service for mission critical applications at leading banks, telecom carriers, e-commerce companies, and other global enterprises.
