

Trifork T4 Application Server Customer Testimonial

Using Trifork T4 in Wavetech's Self-Service System for Wireless Operators

Wavetech provides a complete self-care platform for wireless telephone systems, which allows the end user to interact with the operator through any digital device (SMS, web, voice response, etc.). Moreover, Wavetech provides an advanced real-time rating and billing engine for voice, IP and content.

Carsten Hyldahl Kristiansen CTO, Wavetech

"At Wavetech we are working with Enterprise Application Servers based on world class technologies. We are not only using the JSP and Servlet solutions in our projects, but the full spectrum of Java 2™ Enterprise Edition technologies, such as Container Managed persistence, Java Message Service, message driven beans and others."

Choosing Trifork T4

We chose the Trifork T4 Application Server due to their knowledgeable support team having a very straightforward way of looking at a given solution, especially with regards to J2EE and their Server.

Features like robust running, short debug- and development cycles and hot deployment are key features for us when choosing an app server.

Trifork Support

The possibility of direct contact with the developers of Trifork T4 has helped us speed up our daily work. In contrast, contact to the support department at other application server vendors has often caused a lot of time misspent due to the filters. In certain cases even parts of the relevant J2EE specifications would have to be spelled out before a competent supporter contact was given. Often, this has set us back several days; a sharp contrast to the Trifork way of working with partners.

Developer Productivity

After initial skepticism whether the Trifork T4 Application Server was able to keep up the promised specifications we soon realized how easy and fast the development cycle on the Server was compared to other vendor Servers.

Another pleasant surprise was that one of our new employees worked and developed on the Server after only two days. Pre- Trifork T4, we have never seen new employees working at full speed within a week.

"Not only have Trifork helped us speeding up our development cycle, they also helped us saving tremendous amounts of money in regards to our solutions"

Carsten Hyldahl Kristiansen
CTO, Wavetech

About Wavetech

Started in 1999, Wavetech is an independent software company specialized in delivering real-time customer self-care solutions that allow operators to achieve dramatic cost improvements and to increase revenue and customer loyalty.
