

Elluminate, Inc. is a leading provider of live Web conferencing and eLearning solutions for K-12 and Higher Educational Institutions. With features such as crystal clear two way voice over Internet, the ability to show and remotely control any application running on Windows, MacOS, Solaris or JDS with other participants, and the ability to collaboratively share whiteboards and content, Elluminate captures the essence of face-to-face interaction in an online environment.

Elluminate is a Pure-Java application which has been featured on the Java.com site as an example of a full functionality desktop application. No pre-load of a client-side application is required as Elluminate uses Java Web Start to launch the appropriate software directly off of the web. Elluminate has a server component that runs extremely well on Solaris and supports cross platform clients on Windows, MacOS, Solaris, SunRay or JDS. Elluminate customers such as Nova Southeastern University and Coolschools are using Solaris servers.

For your local Elluminate Sales Office, please go to <http://www.elluminate.com> or contact the appropriate person from the list below:
