

As a part of Sun's exclusive iForce program, Perfigo and Sun have partnered to offer customers one of the most reliable and comprehensive wireless LAN security and management platforms available. Through comprehensive benchmarking and through real-world deployments, Sun's popular LX Linux-based server series has proven an ideal platform for Perfigo's SecureSmart security suite.

INTEGRATED SOLUTIONS FOR SECURING AND MANAGING WIRELESS AND WIRED LAN'S

The introduction of 802.11 wireless computing is adding significant costs and complexity to the task of managing and securing networks. The proliferation of wireless access points and devices along with the evolution of standards present new challenges unaddressed by the previous generation of network security solutions.

Perfigo is making life simpler for enterprises, educational institutions, hospitals, and wireless service providers worldwide. Perfigo SecureSmart is an integrated software solution that combines the capabilities network administrators need most—bullet-proof security and complete control—within one comprehensive framework.

Perfigo advantages:

- Software means massive scalability. One SecureSmart supports thousands of simultaneous users on an encrypted connection.
- Perfigo CleanMachines enforces your anti-worm policies at the wireless edge.
- SecureSmart isn't just a gateway--access point management and rogue detection are integral to total network security
