

Secluda's software product, the AP Intelligent Mail Switch, provides organizations and IT professionals complete control of e-mail and e-mail infrastructures, including:

- Ensuring the delivery of wanted e-mail
- Protecting against unwanted e-mail, spam, and other e-mail threats including harvest attacks, spoof and spam attacks, denial of service attacks
- Eliminating or preventing problems caused by current anti-spam products such as wanted messages incorrectly blocked
- Enhancing the reliability, security and performance of the e-mail infrastructure and existing e-mail applications
- Reducing IT staff stress and improve productivity
- Ensured e-mail operation during e-mail volume attacks such as MyDoom and Netsky

The AP Intelligent Mail Switch provides the greatest range of enterprise-wide protection combined with individual capabilities: IT staff can apply enterprise or organization policies while simultaneously and safely allowing individual users to control their inboxes and who they want to communicate with. Additionally "Guardian Protection" can place kids' inboxes under the total and foolproof control of an adult user who does not need any special training; completely protecting children from all unwanted e-mail.

#### Partial Features List

- SMTP perimeter gateway effectively keeping all unwanted e-mail outside the network
- Safely and effectively implement network policy simultaneously with individual user needs
- Users can safely detain questionable e-mails for further review with no IT action necessary
