

Sirsi Corporation and SUN Microsystems continue to celebrate the successful installation of Sirsi software and services on SUN servers for the INFOhio (Information Network for Ohio Schools) K-12 library network.

Sirsi's UnicornEcole® Library Management system, along with the Web2 interface for student and teacher access to INFOhio's union and local catalogs, are accessed via SUN V880 servers throughout the network.

"Sirsi is proud to be a partner with SUN Microsystems at INFOhio," said Patrick C. Sommers, Sirsi CEO. "Our partnership allows this truly remarkable organization to better serve and inform today's students and tomorrow's leaders in the state of Ohio. Our relationship with SUN enabled us to present a state of the art solution, and SUN's competitive pricing and training assistance helped seal the deal."

When completed in late 2005, INFOhio will have over 2,500 school buildings and over 1.2 million Ohio school children using the Unicorn application on SUN servers.
