

We just signed University of Mississippi (Ole miss) as a Sun COE for SAP's Campus Management student system.

Ole Miss is currently using an E10000, T3 Storage, and other server (V880, E220R, E420R's) for the project. As part of this project, Ole Miss will migrate the datacenter to UltraSPARC III platform over the next 12 months.

Ole Miss will be providing best practices documents, sizing data for the SAP competency Center, and other documents. They will also act as a reference site for SAP's student system on Sun.

Thanks to Edward Lewis for being the driving force behind this!

Stay tuned for more news and collateral coming out of Ole Miss.
