

Migration Services for Sun Java™ System Directory Server

Reduce risk and maximize uptime with a smooth transition

Key Benefits

- Minimize the time, cost, and risk of migration by leveraging Sun's best practices and proven methodologies
- Mitigate risk by assessing, planning, and implementing the migration of large, complex installations
- Maximize availability and uptime with thorough planning and rapid migration
- Education and training help improve knowledge and skills for better system performance
- Proactively identify and resolve issues with your Sun hardware and software with support services

Today's identity management infrastructures require directory services that provide flexibility, scalability, availability, and performance. Sun Java™ System Directory Server 5.x provides a central repository for storing and managing identity profiles, access privileges, application and network resource information, helping reduce the complexity of user administration, strengthen security, lower user administration costs, and improve operational efficiencies.

Sun Services offers migration services that help speed deployment so you can take advantage of the benefits of Sun Java System Directory Server 5.x more quickly. With a range of consulting, training, and support services, our specialists can help you migrate and manage your environment while reducing risk, improving performance, and enhancing security. With Sun Services, you can tap into the expertise you need to complete your transition with confidence.

Cut the time, cost, and risk of migration with consulting services

Directory Server 4.x to 5.x Migration Service

The Directory Server 4.x to 5.x Migration Service is a consulting service that leverages best practices and proven methodologies to help you successfully transition your current directory architecture. Experienced Sun consultants work with you to develop a migration plan that fits your unique needs. We then help you migrate from Netscape Directory Server 4.x to Sun Java System Directory Server 5.x so you can quickly take advantage of benefits of the product, such as enhanced performance, flexibility, and security.

Sun specialists assess your environment for existing functional or performance issues, determine desired capabilities, and create a migration process workflow and project plan. We deliver a migration strategy and design document that outlines the details of migration and work with you to develop test plans that validate the success of migration. After completing the migration, we test and evaluate the results based on your migration plan. Our years of experience and product experience help minimize risk and speed deployment.

Improve performance with training from Sun Services*

- Sun™ ONE Directory Services: Analysis and Planning 5.x
- Sun ONE Directory Server 5.1: Advanced Design and Deployment
- Sun ONE Directory Server 5.x: Maintenance and Operations
- Sun ONE Directory Server: LDAP Concepts
- iPlanet™ Directory Server 5.0 Installation and Administration

Sun ONE Directory Services: Analysis and Planning 5.x (DIR-2217)

This four-day course provides students with the technical knowledge and skills necessary to design a directory service solution deploying Sun ONE Directory Server 5.2.

Sun ONE Directory Server 5.1: Advanced Design and Deployment (DIR-3300)

This four-day course teaches students how to install, configure, design, and deploy highly scalable, available, secure, and manageable LDAP directory services architectures using Sun ONE Directory Server software.

Sun ONE Directory Server 5.x: Maintenance and Operations (DIR-2337)

This three-day course provides students with the opportunity to learn how to perform routine maintenance

and troubleshooting techniques, monitor and tune servers, create and manage multiple databases, and perform other tasks encountered in day-to-day operations of Sun ONE Directory Server 5.2.

Sun ONE Directory Server: LDAP Concepts (DIR-1344-90)

This Web-based course introduces students to the fundamental concepts of LDAP directory services, from a description of directory services and the components of the LDAP protocol to an overview of LDAP software.

iPlanet Directory Server 5.0 Installation and Administration (DIR-1287-90)

This Web-based course teaches the differences between the 4.x and 5.0 release of iPlanet Directory Server, taking students through a detailed procedure that teaches the fundamentals of installing the product on Solaris™ Operating Environment systems.

**NOTE: Course names and descriptions do not yet reflect product name change from Sun ONE Directory Server to Sun Java System Directory Server.*

Keep your solution running smoothly with proactive support services:

- SunSM Software Support Services
- SunSpectrumSM Support

Sun Software Support Services

Software support from Sun is a comprehensive and efficient way to get the most out of your investment in Sun Java System Directory Server 5.x. Experienced support engineers are available to help you identify and resolve technical issues with your Sun software. In addition, you'll always have access to the latest software functionality with upgrades and patches included for covered software.

SunSpectrum Support

The SunSpectrum support program provides four levels of support for Sun hardware and software—from proactive, mission-critical service to basic self-maintenance support. You can get the support program you're looking for based on your unique requirements.

Take the next step

Sun Services has the proven expertise you can rely on to complete your migration to Sun Java System Directory Server 5.x successfully.
