

Java™ CAPS 5.1 Migration Assessment

A Pragmatic Approach

Highlights

- Provides an overview of migration opportunities that exist in your environment
- Generates a solid set of recommendations for an effective and streamlined migration to Java™ CAPS 5.1
- Identifies, classifies, prioritizes SOA drivers powered by Java CAPS 5.1, and justifies associated investments
- Delivered over two-weeks or more

There is no substitute for knowledge and subject matter expertise when approaching a migration project. Whether you are considering an upgrade to the Java™ Composite Application Platform Suite (CAPS) 5.1 for your existing projects, or starting new projects leveraging Java CAPS 5.1, Sun offers the Java CAPS 5.1 Migration Assessment to help throughout your project, from planning to implementation.

Overview

This service offering is designed to help you plan and accelerate the transition to Java CAPS 5.1 from your current SeeBeyond™ Integrated Composite Application Network (ICAN) 5.0.x or Enterprise Business Intelligence (eBI) 4.x based systems. The focus of the Java CAPS 5.1 Migration Assessment is to:

- Assess your existing ICAN 5.0.x and eBI 4.x environment for migration to Java CAPS 5.1
- Provide a detailed technical overview of the new features and enhancements in Java CAPS 5.1 that are related to your environment
- Recommend upgrading one of your representative interfaces or projects to Java CAPS 5.1
- Deliver a working demo of Java CAPS 5.1 with your selected interface or project
- Deliver observations, impact analysis, and migration recommendations

In addition, Sun provides up to two days of consulting to assist your team in developing a best practices implementation plan to identify the appropriate activities, roles, and responsibilities, as well as feasible milestones and time lines for your first Java CAPS 5.1 migration or new service oriented architecture (SOA) pilot project using Java CAPS 5.1.

Beyond this service, Sun's participation can be tailored to meet your needs for ongoing mentoring, quality assurance, and other identified subject matter expertise.

Sun advantage

Sun's pragmatic approach to SOA is driven by these principles:

Commitment to standards and interoperability:

- Sun's approach is based on building interoperable and extensible solutions through the use of accepted, open industry standards.

Comprehensive platform and partner ecosystem:

- Sun and its partners provide a wide variety of fully integrated software suites and hardware systems to develop and deploy service oriented architectures.

Proven architecture, design patterns, blueprints, and recommended practices:

- Customers benefit from Sun's expertise, techniques, and principles in the design and implementation of scalable, extensible architectures for their business systems.

About Sun

Sun provides a complete portfolio of affordable, interoperable, and open software systems designed to help you maximize the utilization and efficiency of your IT infrastructure. Built from the secure, highly available foundations of UNIX® and Java, these systems deliver implementations that are preintegrated and backward compatible. Sun's portfolio consists of Solaris™ and Linux software for SPARC® and x86 platforms, Sun N1™ software, and the Sun Java System.

The Java System is a radical approach that changes forever the way businesses acquire, develop, and manage software. Only Sun has the experience and the end-to-end portfolio to deliver such a unique and industry-revolutionizing strategy. With the Java System, network services and critical business applications are up and running faster, easier, and at a lower cost than ever before, so you can focus on innovation, competition, and bottom-line results.
