

Archiving & Compliance

SAN Solution by QLogic®

With the increasing demands put on IT to backup, archive and retain data for long periods of time (5-7 years) what is the best approach to providing a solution to this growing data problem?

Customer Problems

1. How to maintain data for long periods of time and ensure access, readability and security
2. How to manage large amounts (TBs) of static data in compliance archives in a cost-effective solution

Solution:

Tell your customers about how Sun has just created a purpose-built appliance, the Content Infrastructure System (CIS/2) that makes it simpler to have a multi-tiered data archive solution. Completely configured and integrated by Sun's Customer Ready Systems (CRS) custom manufacturing facility and supported by Sun StorageTek, this exciting new system addresses the age-old problem of how to create, manage and scale a system to manage all of an organization's archive and compliance content.

The CIS/2 provides a common, user accessible repository for all corporate archives including:

- Messaging Content (all e-mail, text messages)
- Business Process Content
- Industry Compliance Content (HIPPA, Sarbanes-Oxley, etc.)

This special purpose-built appliance includes 2x Sun Enterprise 4Gb HBAs (powered by QLogic) and a Sun SANbox 5600 Fibre Channel Switch!

Benefits

- Create, scale and easily manage a content archive cost-effectively in a small footprint
- Establish retention policies for different data types to reduce archive costs

Products to Propose:

- Content Infrastructure System (CIS/2) - which includes 2 4Gb HBAs and 5600
