

**NotesBench R6iNotes Disclosure Report  
for SunFire X4200 M2, AMD Opteron 2220, 2.8GHz  
on Red Hat Enterprise Server Linux 4.0, 64-bit with  
Lotus® Domino 7.0  
January2007**

© 2005 Sun Microsystems, Inc. All rights reserved.  
1 Network Drive, Burlington, MA 01803-0903, USA.

# Section 1: Executive Summary

Sun Microsystems has completed a Notesbench benchmark using the R6iNotes workload on the Sun Fire X4200 M2 Server, 2 dual core sockets at 2.8GHz AMD Opteron 2220 processor. The test was executed at the Sun's Engineering Performance Lab - Burlington, MA in January 2007.

The Server Under Test (SUT) was configured with two dual core, 2.8 GHz AMD Opteron 2220 processors, 16 Gigabytes (GB) of memory, two StorageTek SS3320 SCSI JBOD storage devices, each with twelve 146 GB, 15Krpm disks configured as a single RAID0+1 volume and two 10/100/1000 Mbps Ethernet onboard ports.

The Operating System on the SUT was Red Hat Advanced Server Linux 4.0, 64-bit and the Messaging server Domino release 7.0 was configured with 3 Domino partitions.

In addition to the AMD Opteron X4200 M2 system under test, the benchmark configuration included 3 child driver systems running 34 notebnch clients and one parent driver for the NotesBench R6iNotes workload. All driver systems were connected to the SUT via the TCP/IP network. The detailed System setup and configurations are provided in Appendix A.

The R6iNotes workload simulated 17000 active users sending, deleting and receiving e-mails (built with the dwa7.ntf template) via standard HTTP browser. The mail sent by each user is delivered to mail database of the other users on the System Under Test. The results below demonstrates an outstanding achievement of SunFire X4200 M2 AMD Opteron system in price/performance with 17000 active NotesBench R6iNotes users at 496 ms Average Response time.

The NotesBench R6iNotes describes the Web Access mail workload as: Every 15 minutes each user reads five messages, deletes two messages, and every ninety minutes it sends 1 new mail message (average message and attachment size is 97KB) and calendar invitation to 3 recipients.

R6iNotes Web Access combines the simplicity and universality of a Web browser with the power of an enterprise-class, full-featured application giving Web browser users access to e-mail, calendar, group scheduling, to-do list, invitation and appointments. NotesBench offers an objective way to evaluate the performance of different Mail Servers Under Test using different platforms running Lotus Domino.

The benchmark results are summarized below:

NotesBench Workload	Users Supported	NotesMark	Average Response Time	Price per User	Price per NotesMark
R6iNotes	17000	14347	496ms	\$2.66	\$3.15

## **Section 2: Benchmarking Objectives**

The objective of this benchmark was to provide evidence that Sun's system and operating environment technology are the best choice for organizations looking for a scalable and high performance platform on which to deploy R6iNotes Domino services.

## Section 3: Test Methodologies

The test environment for the NotesBench R6iNotes workload consists of four hardware components: the *server under test (SUT)*, one or more *child drivers* to generate load on the SUT by simulating the activity of R6iNotes Web Access mail users, one *parent driver* to control the progress of the test, and a network through which the various systems communicate.

The server under test was a SunFire X4200 M2 equipped with 2 AMD Opteron 2220 2.8GHz dual core processors with Red Hat Enterprise Server Linux 4.0, 64-bit OS. The Lotus Domino 7.0 server was configured with three partitions.

Two Sun Fire V440 with 4x1.2GHz UltraSPARC III processors on each with 16GB of memory and a V490 with 2 dual core 1.2GHz UltraSPARC IV processors on each with 16GB of memory were configured as child drivers. A total of 34 user accounts were used to simulate 17000 R6iNotes users, each account corresponding to 500 R6iNotes users. One of the Sun UltraSPARC III Sun Fire V440 systems hosted an additional account to run the NotesBench parent driver for overall benchmark control.

The systems were connected by a TCP/IP network running over Ethernet and tied together by one Cisco switch. The switch has been configured as an independent subnet for this experiment. Three driver machines were connected to the switch via a 10/100/1000Mbit/sec on board Fast Ethernet interface. The SUT was connected to the switch via onboard 1Gigabit/sec Fast Ethernet interface.

Each test run began with a number of preparatory steps such as setting up configuration files, initializing mail data bases, starting the servers, and so on. The NotesBench test then began by starting the child drivers' user accounts one by one over a ramp-up period of about 3 hours. Once all the simulated users were active, the peak load was maintained for over six hours. NotesBench then shuts down the child driver accounts one at a time over a ramp-down period of about half an hour. The server was then shut down and logs, configuration files, and other products of the test were collected and archived.

During the test, the SUT's "headroom" was monitored by running standard Linux system monitoring tools: *iostat* and *mpstat*. The outputs of these utilities were post-processed to extract relevant data points. The data points obtained were then plotted.

The name and address book (NAB) contained 34,000 test users in 3 Domino partitions, which were all part of the same Domino domain. All child drivers used the server-resident NAB for name lookups. Each partition was configured with four mail{n}.boxes for mail routing.

The server system had two twelve-drive SS3320 SCSI JBOD disk arrays. A RAID0+1 volume of 24 disks from all two disk arrays was configured with Veritas Volume Manager VXVM taking a slice of 100GB from each of the 24 146GB disks. Total 1 RAID0+1 array was used for Mail database and Domino files under Veritas VXFS file System. Domino executables/binaries, names.nsf, log.nsf, all other .nsf, .ntf files were created on the RAID volume. Eight mailfile directories were used under this file system. The mailfiles were created with Domino dwa7.ntf templates. The Domino data directories are created under the same file system and RAID0+1 volume which had Domino executables/binaries, names.nsf, log.nsf, all other .nsf, .ntf and notesdata files. Hence all the Domino executables and the data files were redundantly protected. One of SUT's internal disks were configured with two disk partitions, one of which were used by the OS, another one was used for OS-level performance statistics collection, tools and custom scripts.

Database activity logging was not enabled during the benchmark run and all Domino tasks were disabled except for Router and HTTP.

During the steady state period of the run, the *show stat mail* command was used every hour for each partition on the Server to verify that at least 90 percent of the mail generated during the test was delivered to the local mail databases. In fact, during the test period, the SUT Domino Server delivered more than 99 percent of the mail generated to the local mail databases. *show stat database* were used every hour during run for each partition. *show stat* command was used at the end of the run for each partition.

To ensure that the results were reproducible, the tests were repeated. The test results showed a very small variation in throughput.

The following NOTES.INI parameters were modified for all the server partitions for this benchmark. All Domino user tasks were disabled except Router and HTTP.

### **Server Notes.ini Modifications**

Debug\_Outfile=/tmp/sut#.txt  
NSF\_BUFFER\_POOL\_SIZE\_MB=512  
ServerTasks=Router,HTTP  
TCP TCPIPAddress=0,20.1.20.xx:1352

## Section 4: Data

The server under test supported 17000 NotesBench R6iNotes users, achieving a 14347 NotesMark rating of transactions per minute with an average response time of 496 milliseconds per transaction. The test ran for a total of over 10 hours, with the steady state lasting for over 6 hours. NotesBench reported no errors.

### NotesNum Output for R6iNotes Test:

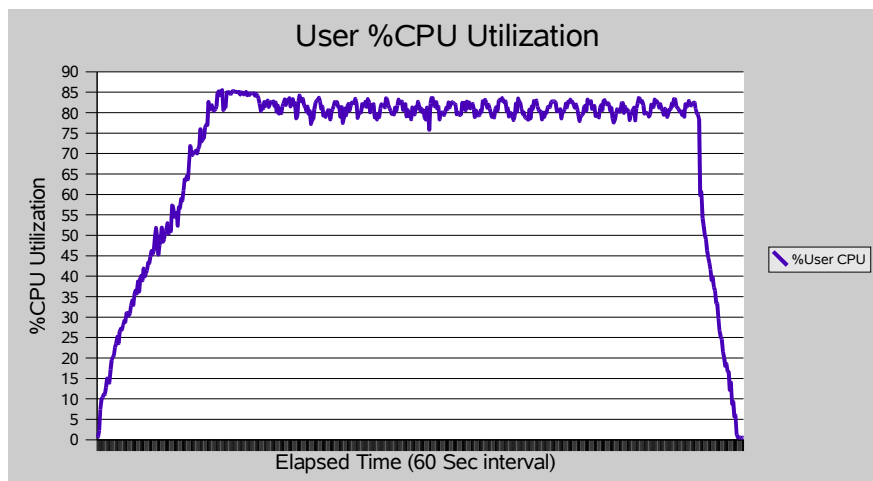

**Min Start Time = 01/18/2007 12:23:24    Max Stop Time = 01/18/2007 23:00:57**

**Total Test Errors = 0**

**Total Test Time = 38220 sec**

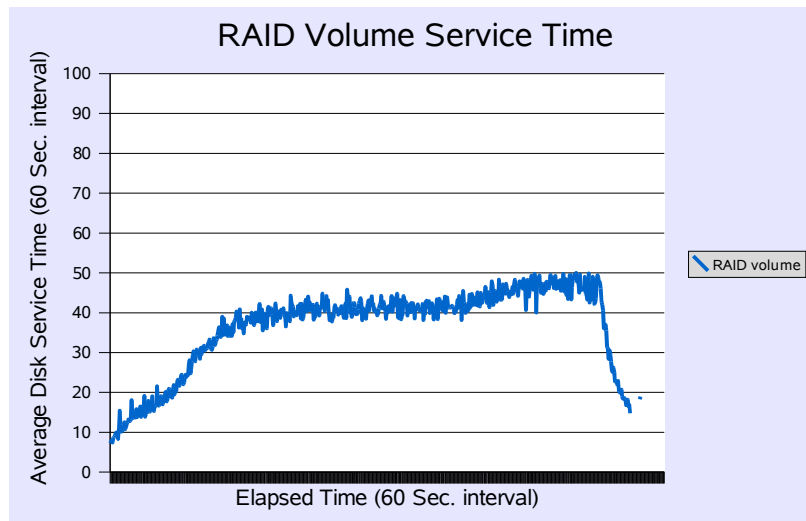

**Test Run:    Users = 17000    NotesMark = 14347    Response Time = 496 msec (01/18/2007 14:26:00 to 01/18/2007 22:16:00)**

During the test, the standard Unix mpstat utility program measured user Total CPU utilization. Samples were taken at 60 Sec. intervals during the ramp-up, steady state, and ramp-down periods. As the following graph shows, the CPU had ~83% utilized by the User.

Disk responsiveness was also measured at 60 Sec. intervals throughout the test, using the standard Unix utility *iostat*. The following graph shows the average time per I/O operation for the RAID volume. Under peak load, the disk volume subsystem averaged about 40 milliseconds to service each I/O request.

The service times were sampled and plotted for one RAID volume.

## Section 5: Analysis

Like any benchmark based on synthetic workloads, NotesBench is more suitable for comparing the "capacities" of different servers relative to each other than for choosing a server for a particular real world situation. The load on a real world server tends to have higher peaks and lower valleys than the load produced by a benchmark executed under tightly controlled conditions. Many industry experts recommend sizing a server to handle peak loads of three to four times the value suggested by a simple average.

One must also determine how closely the benchmark's workload matches the server's intended use. The NotesBench R6iNotes workload simulates users employing a standard browser for sending and receiving e-mails. Each simulated user repeats a cycle of activity lasting roughly fifteen minutes, with extra activity on every sixth cycle (roughly once every ninety minutes):

- Read five messages and mark them as read
- Delete two messages
- Every ninety minutes, creates a mail message and a calendar invitation and sends it to three recipients found in the server's Domino Directory (NAB)

## **Section 6: Conclusions**

This result demonstrates that a single SunFire X4200 M2, 2 dual core 2.8GHz AMD Opteron 2220 processor system can serve even a large organization by supporting 17000 R6iNotes mail users.

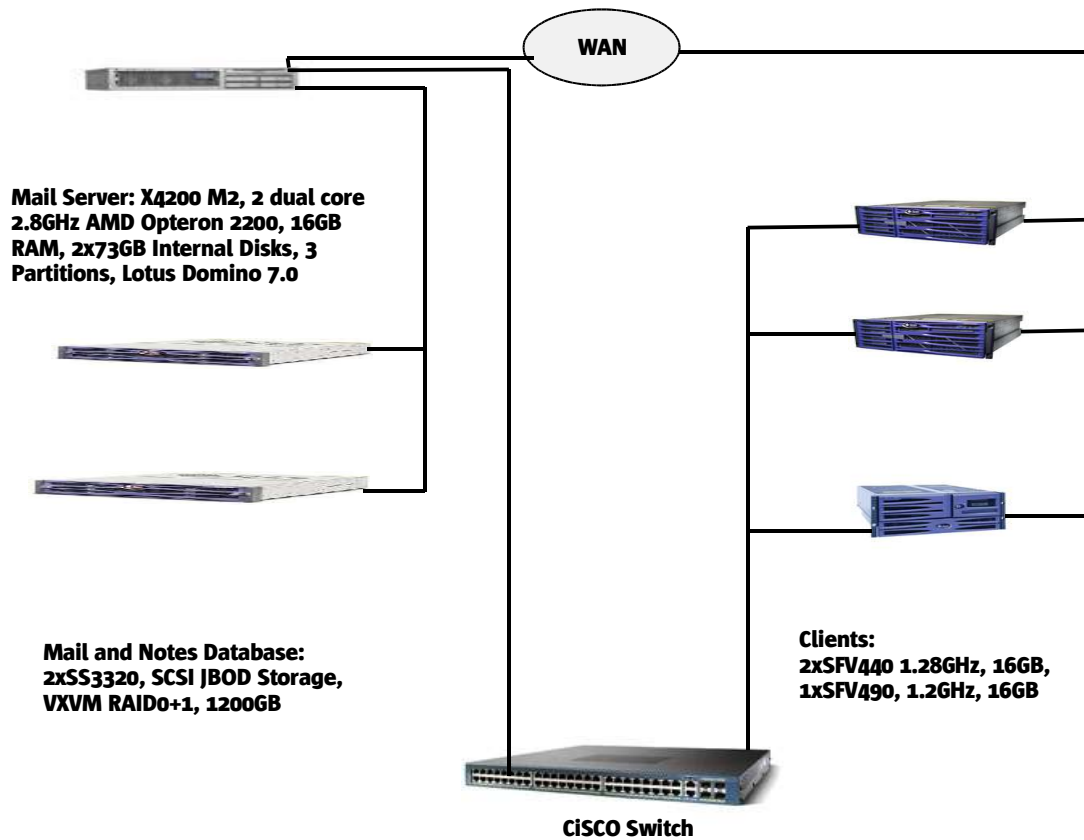

Moreover, SUN's Sun Fire X4200 M2 based on AMD Opteron 2220 processor, is a highly scalable solution. Many of the same components (CPU, I/O interfaces etc.) are shared by other servers in the Sun Fire(TM) Opteron based product lines.

## **Section 7: Statement by Auditor**

The copy of the original report, which was signed by Daryl K. Thompson, auditor for KMDS Technical Associates, Inc., is available upon request.

# Appendix A: Overall Test Setup

The schematic diagram shows the components of the server under test, the parent and child driver systems, and their network interconnections.

X4200 M2 2.8GHz R6iNotes Configuration with Red Hat Enterprise Server Linux 4.0, 64-bit, Domino 7.0 Messaging Server

# Appendix B: System Configurations

	<b>System Under Test</b>	<b>Clients</b>
<b>Model</b>	Sun Fire X4200	Sun Fire V440, Sun Fire V890
<b>CPUs</b>	2 AMD Opteron 2220 sockets with dual cores	4 US-IIIi , 2 dual cores US-IV
<b>CPU clock rate</b>	2.8GHz	1280MHz, 1200MHz
<b>Main memory</b>	16GB	<b>16GB, 16GB</b>
<b>O/S and program disks</b>	2x73GB	2 × 73GB, <b>2x73GB</b>
<b>Data disks</b>	24, 146GB 15Krpm	n/a
<b>Network adapters</b>	1 onboard 10/100/1000 Mbit/Sec. Fast Ethernet interface	1 onboard 10/100/1000 Mbit/Sec Fast Ethernet interface <b>on each</b>
<b>Adapter speed</b>	1 Gb/s	1Gb/s
<b>Operating system</b>	RHEL4	Solaris 10
<b>Lotus software</b>	Domino 7.0	Domino 7.0, Notebench 7.0
<b>Veritas Volume Manager VXVM and Veritas Files System VXFS</b>	Veritas Volume Manager 4.1	

Two SCSI JBOD storage arrays each had a set of 12 disks, were configured as 1 RAID0+1 volume with 1 24x100GB striped and mirrored volume of fully redundant capacity. The software RAID volume created by Veritas Volume manager contained all the mail files, and all Domino data files. The file system used was VXFS-Veritas File System.

The benchmark run was executed on a Mail server with 2 internal disk of 73 GB on the SFX4200 M2, 2.8GHz, 2 AMD Opteron sockets with 2 cores on each socket.

# Appendix C: Operating System Parameters

The SUT ran Red Hat Enterprise Server Linux 4.0, 64-bit without patches. In the future, Sun or Lotus may recommend applying various patches to such a configuration. All patches are available from the SunSolve Online<sup>SM</sup> Web site, <http://sunsolve.sun.com/>.

The following non-default parameter settings were used for configuration. All the settings were specific to this benchmark and may or may not be appropriate for real world servers:

The ulimit is set to the higher value of 40000 file descriptors

- `ulimit -n 40000`

VXFS tuning:

- `read_nstream=1` for the RAID0+1 volume for VXFS files

The VXVM volume used for the Domino mail files, notesdata and executables was mounted with:

- `noatime,tmplog,mincache=tmptcache`

# Appendix D: Notes Parameters (notes.ini)

The following are the complete contents of the *notes.ini* configuration files for four servers.

# **Appendix F: Guidelines for Information Usage**

This report is for use by Sun Microsystems' staff, customers, and resellers. It may be freely copied and distributed provided the entire report remains intact.

# Appendix G: Pricing

## Sun Fire X4200 AMD Opteron 2.8GHz R6iNotes Pricing

Product No.	Description	Qty	List Price	Extended Net Price
A87-KPZ22H8GCBA	Sun Fire X4200 M2 x64 Server: 2x AMD Opteron Model 2220 SE(2.8GHz/1MB) processor, 4x 2GB DDR2-667 memory, 2x73GB 10k RPM SAS drive, DVD-ROM/CD-RW, 2xPSU, Service Processor, 4x10x100x1000 Ethernet ports, 4xUSB 2.0 ports, 4x8-lane PCI-E slots. 1X133MHz PCI-X slot, no power cord, order Geo-specific x-option. Standard Configuration. RoHS-5	1	\$8,895.00	\$8,005.50
SG-XPCIE2SCSIU320Z	RoHS 6 Compliant Sun StorageTek PCI Express x4 Dual Channel Ultra320 SCSI HBA	1	\$510.00	\$510.00
X311L	Localized Power Cord Kit North American/Asian This Product is Hazard Class Y, RoHS compliant	6	N/C	N/C
X4226A-Z	4 GB Memory kit DDR2-667 Registered ECC DIMMs (2x2GB) for Sun Fire X4100 M2 and X4200 M2 x64 servers, RoHS-5	2	\$1,395.00	\$2,371.50
XTA3320R00A0Z730	Sun StorEdge(TM) 3320 Rack Ready, 730GB (5 x 146GB 15Krpm SCSI drives), Ultra320 SCSI-JBOD, and a AC power supplies; (RoHS-5)	2	\$11,390.00	\$15,362.38
EBA95-301-E9M9	ESM Base Application, Media and Documentation; Includes; Sun Storage Automated Diagnostic Environment 2.4, Sun SAN Foundation Software 4.4.5, Storage Portlets	2	N/C	N/C
X1136A-Z	Cable, SCSI, VHDCI/VHDCI, 68-pin, 0.8m, (RoHS-6)	2	\$95.00	\$190.00
XTA-5C1NC-146G15K	RoHS-6, Disk drive in Sun StorEdge(TM) 3000 carrier, 146GB 15Krpm, U320 SCSI LVD	14	\$1,645.00	\$15,531.04
WYSE	Wyse Wy-150 Amber 80 132-Column 141N Serial, 1 Parallel wo/Keyboard	1	\$180.00	\$180.00
Red Hat Enterprise Server Linux 4.0, 64-bit	RHEL 4, ES Standard Support Edition, Software, License, Documentation & 1 Year Support	1	\$799.00	\$799.00
Lotus Domino Messaging Server	Domino R7 Messaging Server per socket	2	\$1,145.00	<b>\$2,290.00</b>
Veritas VXVM and VXFS	Verias Volume Manager 4.1	1	N/C	N/C
<b>Total Price:</b>				<b>\$45,239.42</b>

The prices quoted above were obtained from Sun Microsystems Inc. They are available to any buyer purchasing a single system of this configuration. Someone purchasing this system from a different reseller might be quoted different prices. In the United States, Sun can set list prices but cannot dictate prices to its resellers.

# Appendix H: Vendor-Defined Information

The Sun Fire X4200 M2 server is a new 4-way rack-optimized server powered by AMD's (Advanced Micro Devices) award winning Opteron processors. The first member in a new family of servers architected by Sun, they are the industry's premier X64 servers delivering greater than one-and-a-half times the performance, one of the highest reliability ratings and upto 56% savings in power and heat costs over compared Xeon-based servers, demonstrating Sun's commitment to deliver one of the most compelling X64 (32bit and 64bit) solutions in the market, the dual core Opteron processor. Sun Fire X4200 M2 server delivers world-class 32 bit and 64 bit performance in rack-mounted 1U and 2U form factors with Sun's rock-solid, enterprise class capabilities and quality. Running Solaris(TM), Linux and Windows Operating System – all supported by Sun, the Sun Fire X4200 server allows customer to run the existing 32-bit application on the same hardware as they migrate to their choice of next generation 64-bit applications. The only family of X86 Industry standard servers with application portability across the entire family through binary compatibility.
