

SAP NetWeaver Rapid Installer v2.0 on Sun Powering Quick Portal Connectivity

Building Business Agility

In today's global business environment, organizations are constantly challenged to adapt more quickly to change. To improve responsiveness to changing business needs, enterprises must find new ways to give their employees, partners, and customers easy access to business-critical applications and data. By providing Web-based delivery of SAP business services using portal technology, businesses can give their local and remote SAP users a single point of access to aggregated content that can be reached anytime, from anywhere. SAP NetWeaver Rapid Installer offers an accelerated approach to deployment of Web-based SAP business services using a standardized process with a proven and tested solution that reduces time to operation and is cost-effective to deploy and manage.

SAP NetWeaver Rapid Installer v2.0 on Sun

SAP NetWeaver Rapid Installer is a suite of pre-configured, SAP NetWeaver front-end components, simplifying the implementation and administration of the SAP Enterprise Portal. Combined with the Sun Fire™ V240 Server, SAP NetWeaver Rapid Installer gives enterprises a rapidly deployable portal solution that simplifies the application installation process. The powerful combination of Sun systems and SAP software works with existing infrastructures to help manage inevitable application changes and mitigate the cost of integrating them with the rest of the enterprise. As the only completely 64-bit, pre-configured hardware and software portal solution available on the market, SAP NetWeaver Rapid Installer on Sun offers portal access to mySAP ERP, mySAP CRM, and SAP BW installations right out of the box.

Build Proven, Reliable Systems Fast

With so many parts of the organization depending on business applications for decision support, ensuring mission-critical systems are always available is more important than ever before. And with the need for

rapid response to changing business conditions, it is imperative new systems be installed and configured quickly.

Today, integrating new systems and technologies can be difficult, and complex installation and configuration procedures may not go smoothly the first time. SAP NetWeaver Rapid Installer eases this task by simplifying the installation process. The Sun Fire V240 Server, complete with pre-defined configurations, helps companies jumpstart evolving IT landscapes and get full solutions up and running right the first time. With a proven, tested implementation of SAP NetWeaver front-end components pre-configured for defined Sun server configurations, SAP NetWeaver Rapid Installer can shorten the implementation phase from days to hours, reducing consulting efforts and costs. Pre-installed business content for mySAP Enterprise Resource Planning, mySAP Customer Relationship Management, and SAP Business Information Warehouse makes portal access to existing SAP landscapes a breeze.

SAP NetWeaver Rapid Installer v2.0 on Sun Benefits

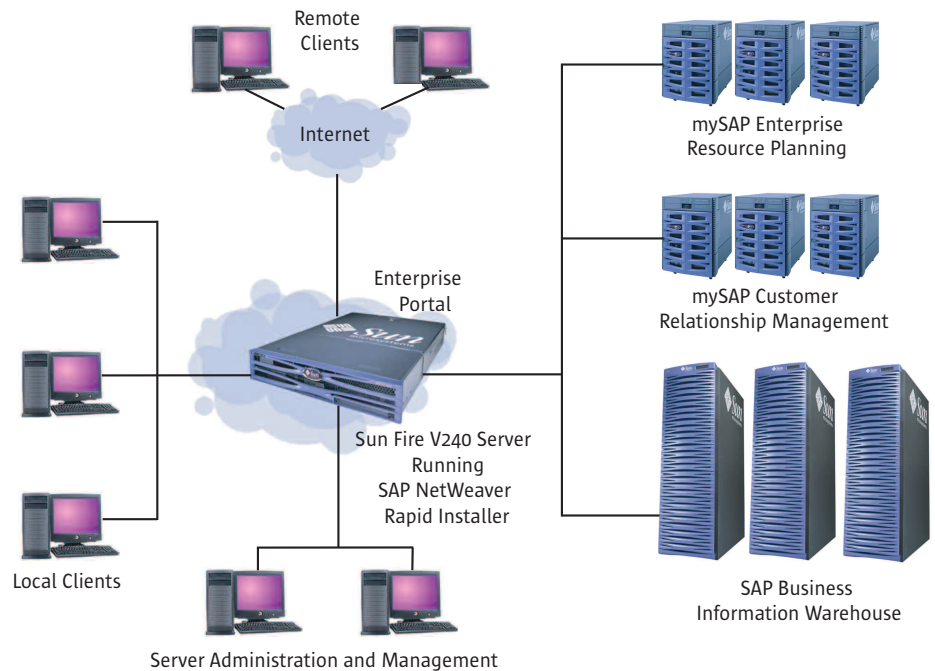

- Provides rapid deployment to SAP NetWeaver
- The only UNIX® platform available
- Jumpstarts evolving IT landscapes
- Simplifies the installation process
- Eliminates time spent configuring and synchronizing components
- Shortens the implementation phase from days to hours
- Helps build stable, reliable systems
- Links to SAP business applications, such as mySAP ERP, mySAP CRM, and SAP BW
- Reduces management complexity, risk and cost
- Pre-configured SAP software running on Sun Fire™ V240 servers
- Complete, pre-defined hardware and software configurations that provide a single point of access to SAP applications
- Automatic connectivity to existing SAP systems (ERP, CRM, BW)
- Support for mySAP ERP, mySAP CRM, and SAP BW, with pre-defined connections to CCMS
- Support of best practices business scenarios for mySAP ERP and mySAP CRM
- Optimized for Sun systems
- Pre-sized for up to 600 users
- Wizard-based installation
- The only 64-bit version available

Ease the Management Burden

Today's economic climate is forcing IT managers to find new ways to drive maximum operational efficiency and increase resource utilization in the face of downsizing and cost reduction pressures. As users draw on SAP NetWeaver and layered SAP business applications to increase enterprise effectiveness, IT departments are challenged to support additional users that want to take advantage of the SAP solutions landscape.

Running on the Sun Fire V240 Server, SAP NetWeaver Rapid Installer eases the management burden. With a Lights Out Management interface, wizard-based installation, and pre-configured connections to the Computing Center Management System (CCMS) for configuration management and SAP system operation, this powerful hardware and software combination provides a simple mechanism for implementing and integrating portal access to SAP systems.

Pre-configured with support for up to 600 users, the Sun and SAP solution incorporates a simple, universal, browser-based interface that enables administrators to quickly and easily provide access to additional users. With a common interface and single point of access, employees, partners, suppliers, and customers can connect easily to the enterprise regardless of location. Furthermore, the cost of providing remote system access through private dial-up lines, remote access appliances and dedicated modems is eliminated, along with costly maintenance and administration.

Secure Valuable Business Information

Security that protects businesses and identities during times of heightened global tensions is in the forefront of people's minds. With multiple systems providing access to employees, partners and customers alike, granular authentication and role-based authorization services are paramount to protecting vital information assets. SAP NetWeaver is integrated with the Sun Java™ Enterprise System, and works in concert with the Sun Java™ System Identity Server and other Sun solutions to provide secure remote access, single sign-on and more. In addition, the Sun Fire V240 Server provides four network connections that physically separate Internet, intranet, SAP landscape and server administration traffic.

Sun and SAP

With proven expertise, a long track record of product and service excellence, and a close working relationship with SAP, Sun offers comprehensive products, service and support to help ensure implementations work as expected and can keep pace with changing business demands. Customers can turn to the Sun Excellence Center for SAP NetWeaver for help in creating a systems architecture for SAP NetWeaver deployments and derive more business value from SAP applications on Sun systems.
