InterScan™ Security for Sun StorageTek™ NAS

➔ KEY BENEFITS

- Threat analysis and mitigation from the leading provider of enterprise content protection
- Multi-layered protection against known and unknown threats
- Leading interoperability for plug-and-play ease
- Endpoint protection for multiple server platforms and storage subsystems, client machines and mobile users
- Ease of use and manageability

Network-attached storage (NAS) makes it easy for users to store, access and share data when they need to. But the risk of spreading viruses throughout the enterprise increases as these files are downloaded or emailed to others. Now Trend Micro and Sun Microsystems have collaborated to test, certify and document integrated security solutions for the Sun StorageTek™ 5000 Family of NAS appliances so you can implement NAS with confidence.

SOLUTION OVERVIEW

The Sun StorageTek 5000 Family is affordable, quick to deploy, and easy to manage. It is practical and affordable enough for simple file sharing, yet powerful enough for storage consolidation, clustering, and centralized backup applications.

Trend Micro™ InterScan™ security prevents viruses from spreading through the network by blocking them at the storage subsystem. Sun and Trend have integrated key features of the InterScan Web Security Suite to scan, detect and remove viruses from files and compressed files in real time. InterScan security delivers 24x7 antivirus support and protection with automatic, incremental virus updates. InterScan performs these operations by making use of the Internet Content Adaptation Protocol (ICAP). Broad platform support simplifies file-sharing across disparate platforms. Centralized management via a Web-based console simplifies administration.

INDUSTRY-LEADING FEATURES PROVIDE COMPREHENSIVE PROTECTION

- Award-winning virus scan engine filters HTTP and FTP traffic to block viruses, trojans and worms hidden in files
- Improved anti-spyware technology detects and blocks spyware and grayware before they infiltrate desktops and burden system resources
- Full integration with Sun StorageTek devices enables real-time, high-performance scanning with minimal impact to storage systems
- Detects and removes viruses—including macro and script viruses—and malicious code using patented Trend Micro technologies
- Delivers thorough log reports and event notifications
